

Ceiling Grid

Ceiling Grid is a ceiling-mounted system designed to help create a room within a room. The grid consists of 60x60 cm modules that can be filled with either acoustic felt panels or open mesh inserts, which can then be decorated with plants. The Ceiling Grid can be assembled in various configurations, allowing multiple levels to hang below one another – creating a striking three-dimensional effect.

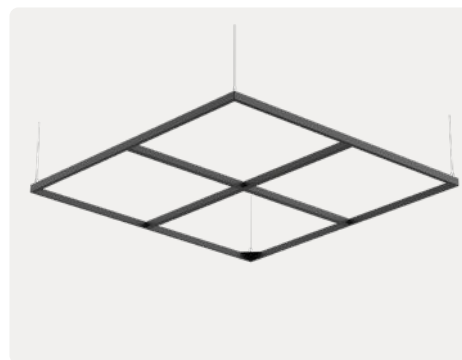

1 Section – 600 x 600
